SHOWCASE SESSION 2

DAY 2 – Tuesday 15 September – 12.35 – 13.20

Stage 1: Delivering the Requirements of 5G with 6GHz (Hosted by Coleago Consulting)

To deliver the 5G (IMT 2020) requirement of a user experienced data rate of 100Mbit/s anytime, anywhere, citywide more mid-band spectrum is required IMT. Allocating spectrum in the 5925 – 7125 MHz band for 5G and its evolution is a critical building block making it economically feasible to offer 5G services at a price point that makes it affordable to all income groups. There is therefore a clear link between the future use of the 5925 – 7125 MHz band for IMT and the United Nations’ Sustainable Development Goals. In countries where little or no C-Band spectrum is available for 5G mobile, using 1,200 MHz of spectrum in the 6GHz band is essential to deliver the user experience data rate of 100 Mbit/s.

Presentation by Stefan Zehle, CEO, Coleago Consulting followed by live Q&A.

Stage 2: Industry Transformation Powered by 5G - Hosted by Ericsson

Stage 3: The Role of Satellite in Bridging the Digital Divide (Hosted by Intelsat)

Presentation by Wabo Majavu, Market Advisor - Mobile Networks, Sub Saharan & MENA, Intelsat
